

TEETER ASSEMBLY

TEETER COMES IN 2 BOXES

BOX 1 Contains Teeter Base, Surface Bracket, and 8 hand tighten bolts. 2 Long Bolts

BOX 2 Contains 2 half sections of the teeter surface along with a central bolt.

Assemble the Teeter base by lining up the holes and inserting the long bolt.

If you are having difficulty lining the holes up, use the ground pegs to keep the holes aligned.

Place the teeter surfaces upside down and attach them with the central bolt provided.

Place the Surface Bracket on the two attached surfaces and attach it using the hand tighten bolts provided.

ASSEMBLE WITH SCREWS **D** PROVIDED

Hand tighten only there are slots Which allow the teeters balance to be adjusted to suit your taste
Once you have found the exact balance you require we recommend that you Place some Loctite blue on the screws To prevent the screws from coming loose Due to impact.

THE TEETER SURFACE IS ATTACHED TO THE BASE USING THE WING NUT **E**
